DETAILED ACTION

Specification

1. The use of trademarks such as ESCORENE and CELLULON have been noted in this application. They should be capitalized wherever they appear and be accompanied by their generic terminology.

Although the use of trademarks is permissible in patent applications, the proprietary nature of the marks should be respected and every effort made to prevent their use in any manner which might adversely affect their validity as trademarks.

Similarly, technical names such as NF405 and NB416 should be accompanied by their generic terminology so that an accurate comparison can be made with the prior art.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 2 and 4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 is indefinite because it contains the phrase "from a positive amount."

This does not limit the metes and bounds of the claim. What diameter does applicant consider a "positive amount?"

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

5. Claims 1-3 and 5-11 are rejected under 35 U.S.C. 102(e) as being anticipated by Chen et al (6395957).

Chen is concerned with the creation of a fibrous layer comprising micro-fine fibers deposited as an aqueous slurry onto a nonwoven web (col. 39, lines 54-56). Said fiber can be any denier below 9 (col. 38, lines 56-60).

Said nonwoven web created by applicants claimed processes (col. 29, lines 10-15).

Said nonwoven web comprising inherently wettable fibers and hydrophilically modified polymers (col. 29, lines 30-35).

Chen discloses applicant's claimed uses (col. 1, lines 15-25).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chen et al (6395957).

Chen teaches a nonwoven base sheet comprising a "portion of finer fibers (col. 4, line 30)," but does not teach specific percentages. It would have been obvious to one having ordinary skill in the art at the time the invention was made to utilize .1-5 weight percent micro-fine fibers, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. In re Aller, 105, USPQ 233. The skilled artisan would have been motivated to utilize .1-5% micro-fine fibers by the desire to optimize the absorbent properties of said nonwoven.
